AB- <NV> NOVELTY - The method involves a seller identifying a commodity to
    a portal's operator. An asset recovery strategy is determined for the
    commodity. The commodity is offered for sale on the portal in
    accordance with the asset recovery strategy.
        The seller is referred to the portal's operator by a third party
    that is selling another commodity to the seller.|
AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a
    networked asset recovery portal coupled to multiple client terminals in
    which a commodity is traded from a seller to a purchaser.
        USE - For asset recovery maximization.
        ADVANTAGE - Creates **new** customers for components **manufactures**
    thereby shifting **commodity** ' based business to one with extremely
    large value added services offerings.
        DESCRIPTION OF DRAWING(S) - The figure shows a process for
    operating a **networked** asset recovery **exchange** .

AB- <PN> WO 200146774 A2|
AB- <NV> NOVELTY - A first multiplicity of offers to sell and second
    multiplicity of offers to buy may be displayed to the community of
    buyers and **sellers** over the communication **network** . At least one
    transaction is executed between a buyer and a seller with respect to a
    particular item, by a buyer's making an electronic indication on a
    respective posted offer to sell for that particular item.|
AB- <BASIC> DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for:
    (a) a system for effecting efficient electronic transactions in
    agricultural marketplace
    USE - For electronic commodity trading.
    ADVANTAGE - **Improved** data **processing** based systems for
    implementing **commodity** transactions within a network environment.
    Smaller growers or vendors would be able to gain access to 'best
    practice' systems and current trading data, allowing them to command
    higher prices for their output. Allows buyers and sellers to lessen, or
    even eliminate, their reliance upon middlemen such as brokers, while
    further enabling sellers to reach a vastly larger market. Sellers would
    no longer be limited to selling their output to only as many entities
    as their sales staff is able to directly contact.
    DESCRIPTION OF DRAWING(S) - The drawing is a simplified block level
    diagram of the structural and functional organization of the activities
    supported by a trading platform in accordance with the practice and
    principles of the present invention.

G06F-017/60
AB- PROBLEM TO BE SOLVED: To provide an auction mall system realizing an
      easy personal auction trade while securing the reliability and
      soundness of the auction and providing rich **commodity** variety by a
      real **specialty** shop not being a virtual shop only on the **Internet**
      alone. SOLUTION: The **auction** headquarter **server** 1 of an **auction**
      headquarter integrally controlling a plurality of **internet** **auction**
       sites performing **auction** of goods on the **Web** is connected to an
      auction franchises **server** 2 of a franchisee franchised by the
      auction headquarter for managing an auction via a **network** . The
      auction headquarter **server** is provided with **Web** contents, which
      has an **auction** mall homepage linked with **Web** contents of **auction**
       mounted on the **auction** franchises **server** for integrally
      introducing a plurality of **auctions** , and member **database**
      registering and controlling a basic attribute of an auction
      participant and an identification code given to each
      participant. COPYRIGHT: (C)2002,JPO

AB- <PN> KR 2002071144 A|
AB- <NV> NOVELTY - A payment system and method is provided to enable a
    buyer to place a purchase order and at the same time, make payment by
    using a transfer from a buyer's account to a seller's account, a
    payment postponement account from which the seller can not withdraw a
    money for a period so that it makes it easy for the buyer to request a
    repayment, a settlement or a payment suspension in a case that a
    delivered **commodity** or a service is abnormal.|
AB- <BASIC> DETAILED DESCRIPTION - The method comprises steps of a buyer
    searching for a desired **commodity** in an electronic commerce site,
    transmitting a purchase order for a searched **commodity** to the
    electronic commerce site, and making payment for the purchased
    commodity (401), the site displaying order specifications and offering
    a web window for enabling the buyer to input the buyer data, delivery
    destination data and a payment method(402), a buyer terminal
    transmitting the **buyer** data, the destination data and **seller** data
    to an account payment **server** if the buyer selects an account payment
    method(403), the account payment server extracting the name of the site
    and an account number, and transmitting a web page for inputting a
    buyer ID and an account **secret** number to the **buyer**
    terminal(404), the **buyer** inputting the **buyer** ID and the account
    secret number on the web page, and the account payment server checking
    a balance of the account(405), the account payment server transferring
    the purchase price from the buyer account to the electronic commerce
    site account which is a payment postponement account(406), the account
    payment server transmitting an account transfer process result to the
    buyer terminal(407), the account payment server transmitting ordered
    data to the site(408), the buyer requesting a repayment to the account
    payment server if a delivered **commodity** is abnormal(410), the account
    payment server requesting detailed data to the site(411), the site
    transmitting the requested detailed data to the account payment
    server(412), the account payment server taking a repayment, a
    settlement or a payment suspension based on the collected data(413),
    and the account payment server transmitting a taken action to the buyer
    via an e-mail(414).

AB- <PN> KR 2002041538 A|
AB- <NV> NOVELTY - An auction method for a direct transaction with deferred payment of commission is provided to save a time and an effort of a member who uses an auction site by performing a direct transaction for processing a **commodity** and price between a seller and a buyer rapidly and performing a deferred payment of an auction commission.|
AB- <BASIC> DETAILED DESCRIPTION - An auction system includes at least one user computers(12-1,..., 12-n), at least one affiliated concerns(14-1,..., 14-n), and an auction site(21), and the elements have an environment capable of performing an interactive communication through the Internet(13). The user computers(12-1,..., 12-n) have a modem, connect to the Internet(13) using a telephone line or a **private** line, connect to the **auction** site(21) using a conventional **web** browser, and may use a service for selling or buying a **commodity** . The affiliated concerns(14-1,..., 14-n) supply at least one **commodity** cooperated with the auction site(21). The auction site(21) manages information of an individual member and the affiliated concern in the auction system and **commodity** information, and performs a smooth auction action between a **commodity** seller and a buyer. The auction site(21) is linked with a credit evaluation system(22) and checks personal information and a credit state of a user. If a normal user registers a **commodity** , the auction site(21) executes an auction. If a **commodity** is bid successfully, an auction result is informed to a **commodity** registrant. If an amount of commission levied in a cyber account per a predetermined period is more than a predetermined amount, the commission is charged in a mobile telephone company(24) or a credit card company(25).

AB- <NV> NOVELTY - Computer network based system comprises market
    participants in the market segment, a network access device accessible
    to the market participants, a computer network connected to the
    computer **network** , and an electronic product **trading** center
    connected to the computer **network** . |
AB- <BASIC> DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included
    for a process for conducting a liquid exchange between several
    participants in a discreet segment of a **commodity** goods market, which
    comprises identifying a standard product in the segment, creating a
    standard contract for the liquid exchange of the standard product, and
    consummating the exchange between the participants.
        USE - The system is used for facilitating transactions in a
    commodity marketplace, particularly for conducting a liquid exchange
    in a discreet segment of a **commodity** goods market, e.g. the plastics
    commodity market.
        ADVANTAGE - The inventive system may be implemented as a
    business-to-business e-commerce site on the world wide **web** . The
    trading center provides increased liquidity for **commodity** goods, or
    provides a location for qualified buyers and sellers of **commodity**
    goods to congregate and consummate transactions, thus facilitating
    finding sellers during times of high demand for **commodities** and
    finding buyers during times of high supply of **commodities** . It allows
    commodities to be bought and sold, e.g. on a spot basis, on a
    continuous basis. It provides lower transaction costs, access to
    consistent quality vendors and products, reliability of supply, lower
    required inventory positions, better cash management, and long-term
    price stability through accurate business intelligence information. It
    also generates real-time performance metrics for suppliers and buyers
    in the industry; and collects, collates, and generates more accurate
    industry supply/demand information and trend information. It
    establishes, provides, and/or assists in the implementation of industry
    standards in areas including complaint systems, terms and conditions of
    sale, payment, financing terms, and shipping details. The combination
    of liquidity and transparent pricing information reduces the premiums
    associated with derivative instruments.
        DESCRIPTION OF DRAWING(S) - The figure is a block diagram that
    provides an overview of the polymer **commodity** market segment supply
    chain.
        pp; 32 DwgNo 2/5|
AB- <TF> TECHNOLOGY FOCUS - POLYMERS - Preferred System: The market segment
    comprises a sub-segment of the **commodity** polymers segment of the
    plastics industry. The sub-segment comprises at least one of
    low-density polyethylene, a linear low-density polyethylene, a
    high-density polyethylene, a polypropylene, a polystyrene, an
    acrylonitrile-styrene-butadiene, and/or a polyethylene terephthalate
    sub-segment.

COMPUTING AND CONTROL - Preferred System: The market participants comprise a purchaser and a seller. They further comprise a feedstock producer, an additive producer, a **commodity** polymer producer, a compounder, a converter, a broker, a recycler, a distributor, an end user, and a service provider. The network access device comprises at least one of a telephone, a cellular-capable device, a personal digital assistant, and a computer. The computer network comprises the world-wide **web** (**Internet**). The electronic product **trading** center comprises a **database** , an executant connected to the database, and a user interface connected to the executant. The database comprises a Microsoft SQLServer database, and/or a document repository comprising a Microsoft Index Server document repository. The executant comprises at least one of a Microsoft Active Server Pages (ASP) program, a java server pages (JSP) program, and a complied program executing under the control of an object request brokering application. The user interface comprises a document created using a document markup language. The system further comprises an electronic **private trading** room, an electronic **exchange trading** floor, an electronic store front, an electronic processor preference center, an electronic sample request and delivery center, and ancillary devices including a global logistics solutions support system, an electronic capacity exchange for product and capacity swaps, a professional development service, a financial service, and a comprehensive industry information service. The system may also include a mechanism to create a derivatives market accompanying the **commodities** market. Preferred Process: The process further comprises conducting an **exchange** in an electronic **private trading** room, conducting an **exchange** on electronic exchange trading floor, conducting an exchange in an electronic store front, and collecting a preference from the participants in an electronic processor preference center. It also comprises receiving a request for a sample in an electronic sample request and delivery center (SRDC), processing the request, and shipping the sample. It also includes providing ancillary services. The standard contract is a forward contract. The process further comprises creating a derivatives market accompanying the **commodities** market, which may involve creating a standard synthetic instrument.|

AB- <PN> KR 2001076762 A|
AB- <NV> NOVELTY - A system for processing an **on** -line **bid** business

capable of keeping a **secret** at high reliability and a certification
is provided to secure a stability equal to a process of a handing bid
business and to prevent a consultation of persons who wish to receive
an order and reduce a cost and a time by testifying the third party of
a definite **commodity** limitation, a **secret** maintenance of a **bid**
document, a verifying of a reliability of a contractor, and a contract.
|

AB- <BASIC> DETAILED DESCRIPTION - In an **on - line bid** business
processing system including a **web** client and a **bid server** , the
bid server receives a purchase requesting document from a web client
of an ordering person. In addition, the **bid server** prepares a
public notification document of a bid and publicizes the document, and
receives a **bid** participating application form of the **web** client of
the ordering person, and selects a successful bidder and issues a
successful bid notifying document.

AB- <PN> EP 1118953 A2|
AB- <NV> NOVELTY - Buy and sell orders in the form of profiles including
one price and quantity coordinate that associates a preference value,
are received for a particular security. A synthetic profile generated
from available quantities in the profiles at each price and the
preference value, is matched with a contra side profile for
facilitating a trade.|
AB- <BASIC> USE - For anonymous trading of securities including assets such
as futures, derivatives, options, bonds, currencies, **commodities** ,
insurance contracts, etc., over anonymous and **confidential** crossing
network that matches **buy** and **sell** orders of traders or
institutional investors. Also for trading media time, airline tickets,
concert tickets, electronic components or any contract for goods or
services.
        ADVANTAGE - Allows traders to input satisfaction density profile

and maximum size limit which characterizes trader's degree of
satisfaction to trade at any and all prices and sizes, and that matches
orders, hence each trader is assured that the overall outcome of
process in terms of average size and price, has maximized the mutual
satisfaction of all traders.
    DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
anonymous matching system.

AB- <NV> NOVELTY - Confirmation mailer subsystem (34) parses and imports
    the required data from the OTC database (28) to an envelope server
    database (36). Envelope **server** (38) generates a **trade** confirmation
    document using the data parsed and imported from the database (28). The
    confirmation document is included in a secure electronic envelope (40)
    which is transmitted to the subscriber station (22).|
AB- <BASIC> DETAILED DESCRIPTION - Password and trade details data of the
    customer are stored in a OTC database (28). The electronic envelope
    (40) is transmitted to the subscriber station (22) over a public
    internet or **private** network. The password **data** is supplied to the
    database (28) of the OTC from the subscriber. The trade details data is

based on information of each trade performed by the subscriber. The electronic envelope comprises the e-mail address of the customer. An INDEPENDENT CLAIM is also included for electronic trade confirmation system.

USE - For confirming trade transactions by transmitting secure electronic envelopes containing **trade** confirmations via the **internet** or **private** network to customer's e-mail **address** to buy and sell stocks, bonds, mutual funds or other **commodities** .

ADVANTAGE - Since **trade** confirmations are transmitted via public **internet** or private network in a secure and confidential manner, the system is cost efficient and the postage and printing cost associated with mailing hardcopy confirmations is reduced.

DESCRIPTION OF DRAWING(S) - The figure illustrates the hardware configuration of **online** **trade** confirmation system.

AB- PROBLEM TO BE SOLVED: To establish an insurance mediation market on the
    Internet for enabling each of individuals (including juristic
    persons) present the insurance whose contents are freely proposed to
    some extent to auction in accordance with the individual risk
    ·circumstances and also enabling everyone to freely subscribe and
    accept the market to some extent, thereby to establish a market
    having higher reliance than the conventional **commodity** **auction** on
    the **Internet** and also to establish the similar markets about the
    student loans, debt and credit of money and loans. SOLUTION: In
    addition to a homepage technique of the conventional **commodity**
    auction, various methods are available including a credit treatment
    (a method that uses a specific pattern that can be applied only by a
    manager in a page and ensures the truth/personality of a part that is
    modified/ **hidden** by the pattern in the **auction**   **data**). COPYRIGHT:

CL- 29.4 (PRECISION INSTRUMENTS -- Business Machines); 45.4 (INFORMATION
    PROCESSING -- Computer Applications)
AB- PROBLEM TO BE SOLVED: To eliminate waste for new **commodity**
    information registration at a **specialty** store and speedily complete
    the **commodity** master by registering new **commodity** information
    from a **specialty** store which obtain the new **commodity** information
    early.

    SOLUTION: A **specialty** store A inputs new **commodity** information
    from an input part 3 by using the processing part 4 of a POS system
    (a) and registers it in a store commodity master and a new commodity
    information transmission file. The host computer 9 at a processing
    center generates a store-classified new commodity information
    transmission file from a commodity master and a POS information
    management master on the basis of the new **commodity** information
    sent from the **specialty** store A and sends it to respective
    specialty stores. The POS system of a specially store B to which the
    file is sent performs the registration to the commodity master on the
    basis of the store-classified new commodity information transmission
    file.

AB- <PN> KR 2002063080 A|
AB- <NV> NOVELTY - An **internet**   **auction** method and system is provided to
     offer various types of **auction** services, such as a lottery **auction** ,
     a multiple price **auction** , a **hidden** card **auction** , a discount
     auction , a chatting auction, a group auction as well as a general
     auction so that it can widen a range of a user selection, increase a
     user satisfaction and activate an **internet**   **auction** . |
AB- <BASIC> DETAILED DESCRIPTION - The method comprises steps of an auction
     seller registering an article for sale at an auction service site by
     inputting data needed for a registration(401), a bidder selecting a
     desired auction type while inputting necessary data(402), the auction
     service site closing the auction procedure(403, 404), the service site
     checking if the auction is successful, in a case of a successful
     auction, determining an auction winner and a winning price, noticing
     the auction result, and notifying the seller and the winner of the
     auction result via an e-mail(405, 406), the winner requesting a
     delivery of the article while remitting corresponding money to an
     account of the service site, and the service site notifying the
     remittance of the seller via an e-mail(407), the seller confirming the
     remittance and delivering the article to the winner, and the winner
     checking the delivered article(408), and the service site paying the
     article to the seller(409). In the lottery auction, the service site
     designates a bidder to a group, draws a lottery for determining one
     group, and determines as an auction winner the highest price bidder
     among the group. In the multiple price auction, the bidder offers a
     multi-stepped price, and the service site determines as an **auction**
     winner the highest price **bidder** at the last step. In the **hidden**
     card **auction** , the service site allows a bidder to participate in the
     auction once more, and enables the bidder to hide the bidding price and
     open the price at the last step. In the discount auction, the service
     site discounts the winning price by a certain ratio. In the discount
     auction, the service site enables the bidders to chat with other
     bidders. In the group auction, the service site designates a discount
     ratio for a bidder group according to the bid amount, and determines as
     an auction winner the highest price bidder among the group.

Track Data Will Develop Software for E.F. Hutton
American Banker - December 6, 1984, Thursday; Pg. 6
WORD COUNT: 117

TEXT:
... Hutton & Co. announced this week that Track Data Corp. will develop the
software for satellite **delivery** of an advanced stock quotation service to
the more than 400 Hutton offices around the...

... will consist of Data General computers to process input from the stock,
option, and commodities **exchanges** . **Real** **time** prices then will be
broadcast over Hutton's **private** satellite network.

April 8, 2003 3 14:51

Track **Data** , which is based in New York, is a supplier of real time stock market data...

requirement. Forward contracts were essentially defined as contracts for future **delivery** to which farmers or farm interests were counterparties or in which the seller, if not...

...The next major piece of federal legislation affecting futures regulation was the Commodity Exchange Act (**CEA**) of 1936. As in the case of the Grain Futures Act, an important objective of the **CEA** was to discourage forms of speculation that were seen as exacerbating price volatility. In addition, the **CEA** introduced provisions designed primarily to protect small investors in commodity futures, whose participation had been...

...that is, futures brokers, and for the segregation of customer funds from FCM funds. The **CEA** also expanded the coverage of futures regulation to cover contracts for cotton, rice, and certain...

...fundamental changes in the objectives of derivatives regulation. However, it expanded the scope of the **CEA** quite significantly. In addition to creating the Commodity Futures Trading Commission (CFTC) as an independent...

...giving the CFTC exclusive jurisdiction over commodity futures and options, the 1974 amendments expanded the **CEA** 's definition of " **commodity** " beyond a specific list of **agricultural** **commodities** to include "all other goods and articles, except onions, . . . and all services, rights, and interests in which contracts for future **delivery** are presently or in the future dealt in."
    In one respect, this was sweeping deregulation...change brought a tremendous range of off-exchange transactions potentially within the scope of the **CEA** . In particular, it could be interpreted to extend the broad prohibition on off-exchange trading...
